Nintendo of America introduced Virtual Boy today, a 32-bit home video-game system that it says includes three-dimensional effects. "Virtual Boy will take video-game players to a completely new dimension in gaming," Peter Main, Nintendo's executive vice president of marketing, said, adding that the American unit of the Nintendo Company of Japan expects to sell more than 1.5 million hardware units and 2.5 million pieces of software by the end of the year. The new game will have a retail price of \$179.95.

First to College, and Then to the Mill

When a young man graduates from high school, he is often told to go to college. But for many, the path to a four-year university is not the only one. Some students, like the one in the photo, are more interested in learning a trade. They go to a vocational school, where they can earn a certificate or diploma in a specific field. This is a path that is often overlooked, but it can lead to a well-paying job and a career. The article discusses the benefits of vocational education and how it can be a viable alternative to a traditional college education.

Young engineers are encouraged to take on a variety of projects at school.

At the same time, many students are also interested in learning a trade. They go to a vocational school, where they can earn a certificate or diploma in a specific field.
