About the Archive

This is a digitized version of an article from The Times's print archive, before the start of online publication in 1996. To preserve these articles as they originally appeared, The Times does not alter, edit or update them.

Occasionally the digitization process introduces transcription errors or other problems; we are continuing to work to improve these archived versions.

Nintendo of America introduced Virtual Boy today, a 32-bit home video-game system that it says includes three-dimensional effects. "Virtual Boy will take video-game players to a completely new dimension in gaming," Peter Main, Nintendo's executive vice president of marketing, said, adding that the American unit of the Nintendo Company of Japan expects to sell more than 1.5 million hardware units and 2.5 million pieces of software by the end of the year. The new game will have a retail price of \$179.95.

A version of this article appears in print on Aug. 22, 1995, Section D, Page 7 of the National edition with the headline: Introduction by Nintendo. [Order Reprints](#) | [Today's Paper](#) | [Subscribe](#)

First to College, and Then to the Mill

BY JEFFREY M. HARRIS
PHOTOGRAPH BY JEFFREY M. HARRIS

When a young man graduates from high school, he is often told to go to college. But for many, the path to a four-year university is not the only one. Some students, like the one in the photo, choose to go to a community college first. This is a common choice for students who want to save money or who need to complete prerequisite courses before entering a four-year university. The student in the photo is a young man who has just finished his first semester at a community college. He is standing in front of a building that is part of the college's campus. The building has a modern design with large windows and a flat roof. The young man is wearing a dark jacket and a light-colored shirt. He is looking towards the camera with a slight smile. The background shows a paved area and some trees. The overall scene is a typical campus setting.

Young engineers are accustomed to the use of a variety of graduate school.
